Dialogs and Menus

Every android device contains a hardware button called menu, we can use it to show our own menus,
Using codes on my page, create the following:

Create a menu containing 3 items:

![Menu with options](image)

When the first item is selected display a date dialog that points to the date of today and ready to be set. And when user clicks set, display a Toast Message with the new date.

![Date dialog](image)
If we clicked the second menu item a time picker dialog should be displayed and when set is clicked also show a toast with the new date.

![Time Picker Dialog](image)

The last item in our menu should display a dialog similar to this:

![Dialog Example](image)

When ok is clicked show a Toast indicating that ,, same goes for cancel 😊

^_^
